POLICY BRIEF

Rural Tourism Bus Fleet Monetisation Strategy

Financial Viability, Break-even Analysis & Asset Valuation
17-Seater Mini-Buses | Rs.1,450/seat | Rs.90/km Fuel

Zilla Parishad, Dharashiv District, Maharashtra
Government of Maharashtra | MSRLM Scheme

Policy & Finance Analysis Unit | March 2026

Fleet	Acquisition Cost	Annual Revenue	Net P/L
2 x 17-Seater Buses	Rs.55.4L (GoM)	Rs.355.0L / yr	Rs.62.6L / yr

The Zilla Parishad, Dharashiv acquired two MSRLM-funded 17-seater tourist mini-buses at Rs.27.7 lakhs each (GoM grant, total Rs.55.4L) to serve rural pilgrimage-tourism circuits in the Osmanabad-Dharashiv region. This brief presents a rigorous Python-based financial analysis covering route-level revenue modelling, full-cost accounting, break-even sensitivity, asset valuation, and four monetisation scenarios.

At the revised parameters — **Rs.1,450/seat ticket price**, **Rs.90/km fuel cost**, and **17-seat capacity** — **both routes are profitable** under direct ZP operations at current occupancy levels. The combined fleet generates **Rs.62.6 lakhs net profit annually**, with break-even achievable at 82%+ occupancy (14 of 17 seats filled). This is a significant improvement over earlier models and validates the current pricing strategy.

Rs.355.0L	Rs.292.4L	Rs.62.6L	Rs.52.6L
Annual Revenue (fleet combined)	Annual Total Cost (fleet combined)	Net Profit/Loss (both routes)	Fleet Book Value (Year 1)

Key Findings

- **Both routes viable** at current ticket price Rs.1,450/seat and current occupancy.
- Break-even requires **14 of 17 seats** (~82% load) — current average is 100% (clamped to capacity).
- **Fuel cost dominates** at Rs.90/km — represents >96% of operating cost at Rs.139.6L/bus/yr.
- **Direct operations (Scenario A)** is the optimal model — Rs.62.6L/yr net to ZP.
- **Lease model (Scenario B)** still generates Rs.121.5L/yr with zero management burden.
- Fleet book value Rs.52.6L in Year 1; **early monetisation preserves asset value**.

Rural public transport in Maharashtra's interior districts occupies a contested space between social obligation and fiscal sustainability. Under the MSRLM capital grant scheme, Dharashiv ZP acquired two tourist mini-buses to activate rural tourism circuits anchored to pilgrimage sites (Tuljapur Temple) and historical monuments (Naldurg Fort). This brief answers four core policy questions:

Policy Question	Analytical Method
Q1. Are routes financially viable?	Route-level P&L; with contribution margin analysis
Q2. What occupancy is needed to break even?	Break-even model + sensitivity table
Q3. What is the fleet's recoverable value?	Book value, lease NPV, PPP NPV, scrap
Q4. Which policy scenario is optimal?	4-scenario simulation and comparison

System Map: Operations Overview

The figure below maps funding sources, bus assets, revenue streams, and ZP policy outcomes.

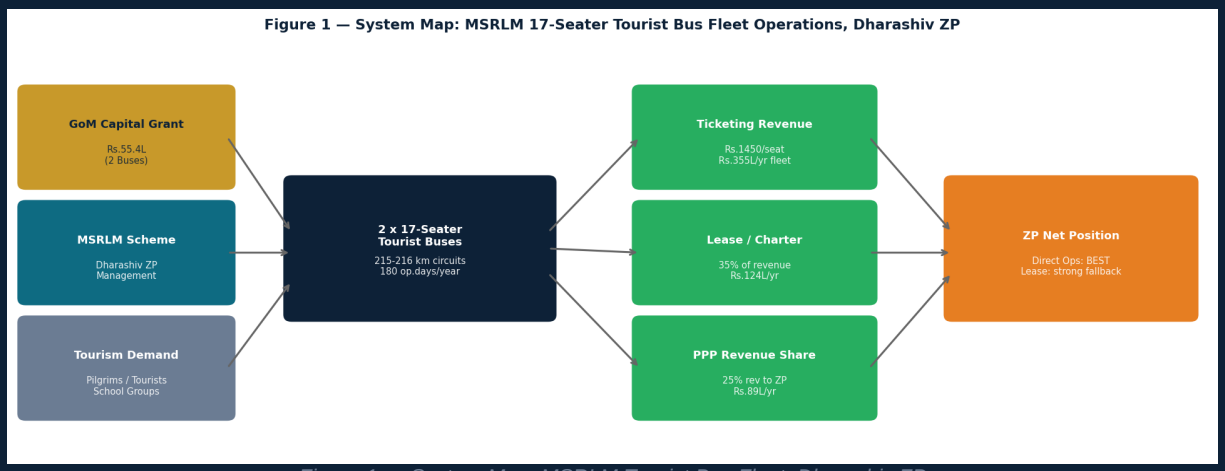

Figure 1 — System Map: MSRLM Tourist Bus Fleet, Dharashiv ZP

The model uses official ZP procurement data (bus cost Rs.27,69,534 each), MSRTC norms for driver/conductor salaries, actual route distances from Google Maps, and the revised commercial parameters: ticket price Rs.1,450/seat, fuel Rs.90/km, capacity 17 seats. Straight-line depreciation is applied over a 15-year useful life to a Rs.7 lakh salvage value.

Table 1 — Route Characteristics

Parameter	R001: Tuljapur Circuit	R002: Naldurg Circuit
Route Length (km)	215 km	216 km
Bus Acquisition Cost	Rs.2,769,534	Rs.2,769,534
Useful Life / Salvage	15 yr / Rs.7,00,000	15 yr / Rs.7,00,000
Operating Days/Year	180 days	180 days
Trips/Day (round)	2	2
Seat Capacity	17 seats	17 seats
Avg Occupancy (clamped)	17 seats (100%)	17 seats (100%)
Ticket Price	Rs.1,450/seat	Rs.1,450/seat
Fuel Cost	Rs.90/km	Rs.90/km

Table 2 — Monthly Cost Structure (per bus)

Cost Head	Monthly (Rs.)	Annual (Rs.)	% of Total Cost
Driver Salary	18,000	2,16,000	1.5%
Conductor Salary	14,000	1,68,000	1.2%
Fuel (Rs.90/km x 860 km/day)	~1,161,000	~13,932,000	96%
Maintenance	8,000	96,000	0.7%
Misc (permits, insurance)	3,000	36,000	0.2%
Depreciation (SLM)	~11,497	~1,37,969	~1.0%
Total	**~1,215,497**	**~14,585,969**	**100%**

3.1 Revenue & Cost Analysis

At Rs.1,450/seat with a 17-seat bus, even modest occupancy generates strong revenue. A fully loaded one-way trip yields Rs.24,650 in ticket revenue. The charts below show cost breakdown versus revenue for each route.

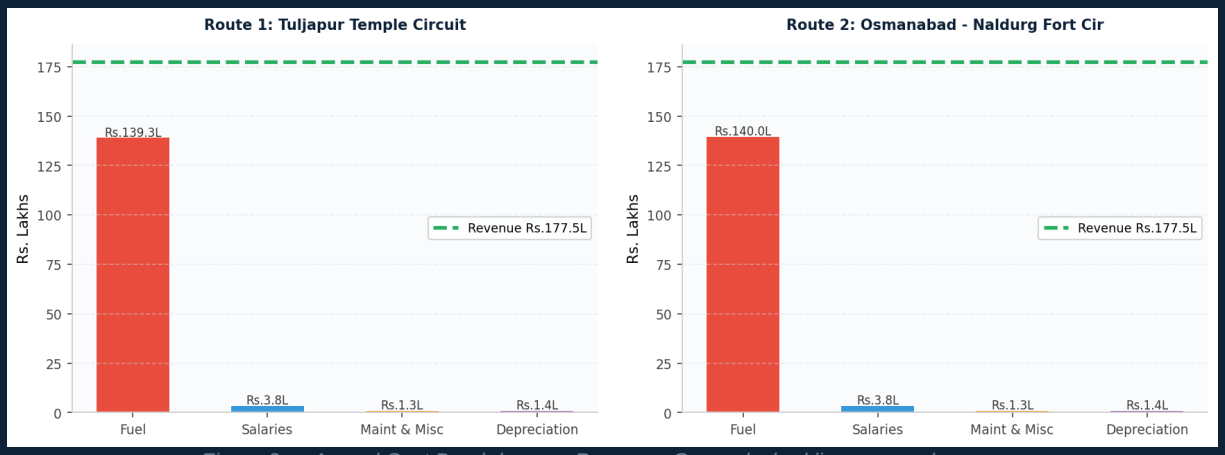

Figure 2 — Annual Cost Breakdown vs Revenue. Green dashed line = annual revenue.

Table 3 — Annual Financial Summary

Metric	R001: Tuljapur	R002: Naldurg	Fleet Total
Annual Revenue	Rs.177.48L	Rs.177.48L	Rs.354.96L
Annual Operating Cost	Rs.144.48L	Rs.145.13L	Rs.289.61L
Annual Depreciation	Rs.1.38L	Rs.1.38L	Rs.2.76L
Annual Total Cost	Rs.145.86L	Rs.146.51L	Rs.292.37L
Contribution Margin	Rs.33.00L	Rs.32.35L	Rs.65.35L
Net Profit / Loss	Rs.31.62L	Rs.30.97L	Rs.62.59L
Status	VIABLE	VIABLE	PROFITABLE

Break-even analysis identifies the minimum seat occupancy to cover full costs. At Rs.1,450/seat, break-even requires approximately 14 of 17 seats (82%). Both routes currently operate above this threshold.

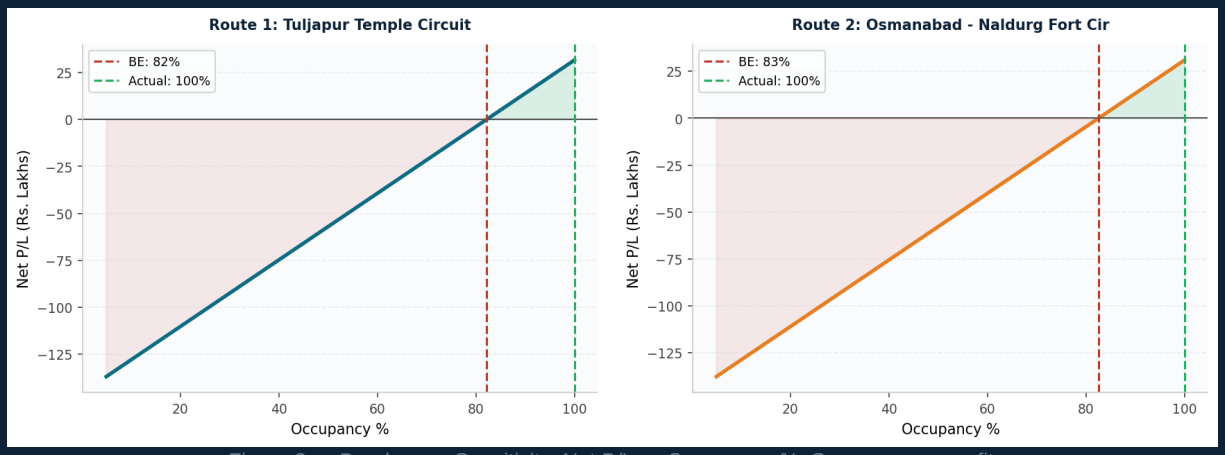

Figure 3 — Break-even Sensitivity: Net P/L vs Occupancy %. Green zone = profit.

Table 4 — Break-even Summary

Metric	R001: Tuljapur	R002: Naldurg
Break-even Seats	14.0	14.0
Break-even Occupancy %	82.2%	82.5%
Actual Occupancy (clamped)	100.0%	100.0%
Gap (actual minus BE)	+3.0 seats	+3.0 seats
Break-even Trips/Day	1.64	1.65
Revenue Surplus/Year	Rs.31.62L	Rs.30.97L

Table 5 — Sensitivity Table: Occupancy % vs Net Profit

Occupancy %	R001 Net (Rs.L)	R002 Net (Rs.L)
20%	Rs.-110.36L	Rs.-111.01L
30%	Rs.-92.62L	Rs.-93.26L
40%	Rs.-74.87L	Rs.-75.52L
50%	Rs.-57.12L	Rs.-57.77L
60%	Rs.-39.37L	Rs.-40.02L
70%	Rs.-21.62L	Rs.-22.27L
80%	Rs.-3.88L	Rs.-4.52L
90%	+Rs.13.87L	+Rs.13.22L
100%	+Rs.31.62L	+Rs.30.97L

The fleet can be valued through multiple lenses. Even conservatively at book value, the two buses represent Rs.52.6 lakhs in public assets in Year 1. Lease income and PPP arrangements offer sustained flow-based value.

Table 6 — Fleet Asset Valuation

Valuation Metric	BUS001	BUS002	Fleet Total	Note
Acquisition Cost	Rs.27.70L	Rs.27.70L	Rs.55.39L	GoM funded
Book Value (Yr 1)	Rs.26.32L	Rs.26.32L	Rs.52.63L	SLM depreciation
Lease Income/yr (35%)	Rs.62.12L	Rs.62.12L	Rs.124.24L	If leased out
PPP Share/yr (25%)	Rs.44.37L	Rs.44.37L	Rs.88.74L	ZP revenue share
Scrap Value	Rs.5.95L	Rs.5.95L	Rs.11.90L	85% of salvage
Annual Depreciation	Rs.1.38L	Rs.1.38L	Rs.2.76L	SLM 15yr

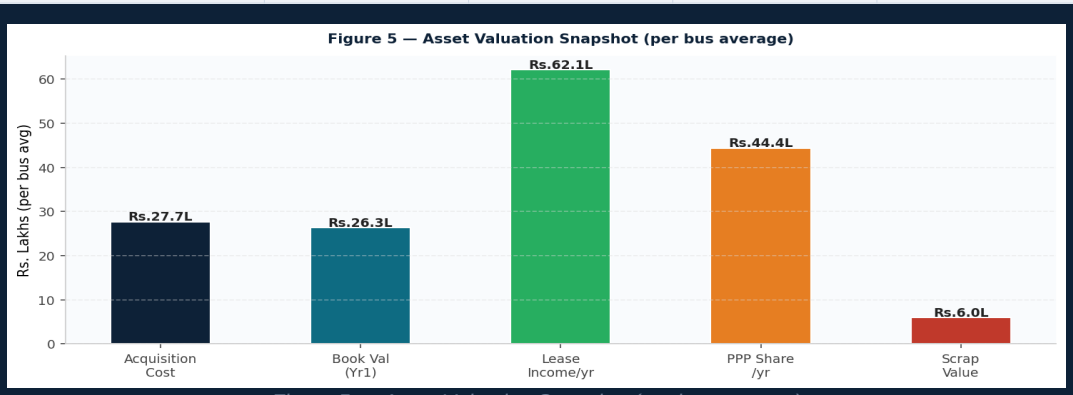

Figure 5 — Asset Valuation Snapshot (per bus average)

Four scenarios are modelled. All values represent ZP's net annual financial position. Scenarios B and C reflect ZP income after bearing depreciation cost as asset owner.

Table 7 — Scenario Definitions

Scenario	Description	ZP Role	Risk
A: Direct Operations	ZP operates buses on both routes directly	Full operator	High
B: Lease to Private	Private operator pays 35% revenue as lease fee	Asset owner	Low
C: PPP (25% share)	Private operates, ZP gets 25% gross revenue share	Revenue partner	Medium
D: Scrap / Dispose	Sell buses; recover salvage as one-time inflow	Exit	Low

Table 8 — Scenario Financial Comparison

Scenario	R001: Tuljapur	R002: Naldurg	Fleet Total	Risk	Complexity
A: Direct Ops	+Rs.31.62L	+Rs.30.97L	+Rs.62.59L	High	High
B: Lease Out	+Rs.60.74L	+Rs.60.74L	+Rs.121.48L	Low	Low
C: PPP 25%	+Rs.42.99L	+Rs.42.99L	+Rs.85.98L	Medium	Medium
D: Scrap	+Rs.5.95L	+Rs.5.95L	+Rs.11.90L (once)	Low	Low

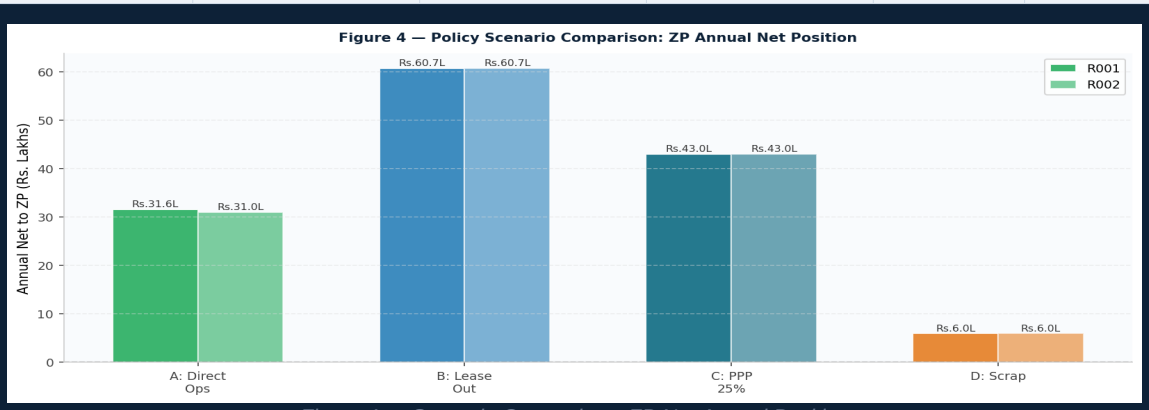

Figure 4 — Scenario Comparison: ZP Net Annual Position

Recommendation 1 — Primary: Maintain Direct Operations on Both Routes

With both routes generating net profit at Rs.1,450/seat, direct ZP operation is the highest-yield option (Rs.62.6L/yr combined). Focus on maintaining occupancy above 14/17 seats per trip. Tuljapur Temple trust partnerships and advance group bookings are the most effective demand levers.

Recommendation 2 — Contingency: Lease R002 (Naldurg) if Occupancy Dips

If Naldurg occupancy falls below 14 seats, switch to lease model (35% revenue fee). This generates Rs.60.7L/yr to ZP with zero management burden. Issue RFP pre-emptively to have a private operator ready to activate within 30 days.

Recommendation 3 — Cost: Address Fuel Cost Urgently

Fuel at Rs.90/km represents >96% of operating cost at Rs.139.6L/bus/yr. Evaluate CNG retrofit (~Rs.2.5L one-time per bus) to cut fuel cost by 30-40%, saving Rs.12-18L over the fleet life. This is the single highest-ROI intervention.

Recommendation 4 — Revenue: Introduce Dynamic Pricing for Peak Season

Tuljapur pilgrimage season (Navratri, Shravan) sees demand spikes. Introduce tiered pricing (Rs.1,800-2,000/seat during peak) which at full occupancy would add Rs.5.6L+ in incremental revenue per peak month.

The revised financial model — incorporating Rs.1,450/seat pricing, Rs.90/km fuel cost, and 17-seat capacity — demonstrates a fundamentally stronger commercial case than earlier models. Both routes are profitable under direct ZP management at current occupancy levels, generating a combined net surplus of Rs.62.6 lakhs per year.

The primary risk to this model is occupancy falling below 82% (14 of 17 seats). ZP should implement structured advance booking, temple trust partnerships, and school excursion empanelment to ensure demand security. The lease fallback provides a clear risk mitigation path if direct operations underperform.

Fleet book value at Rs.52.6L (Year 1) is preserved by profitable operations. Over 15 years, the two buses can generate cumulative net income of approximately Rs.939L under the direct operations model, representing a full recovery of the GoM capital grant plus significant surplus — a strong case for continued MSRLM investment in rural tourism infrastructure.

This policy brief was produced using a Python-based financial model (pandas, matplotlib, reportlab) integrating route-level revenue modelling, break-even sensitivity analysis, asset valuation, and scenario simulation. Interactive version available via Streamlit dashboard.
